(54) LIQUID CRYSTAL DISPLAY DEVICE, ITS MANUFACTURE AND ELECTRONIC INSTRUMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a liquid crystal display device which equalizes its color reproducibility both in the cases of a reflective display and a transmissive display, a method for manufacturing it and an electronic instrument.

SOLUTION: The liquid crystal display device is made by holding a liquid crystal 25 between a front side and a rear side substrates 21, 22 and is provided with plural spacer parts 221 with slits, respectively formed on the surface of the rear side substrate 22 placed opposite to the front side substrate 21, plural reflection plates 222 with the slits corresponding to the slits of the spacer parts 221, respectively formed on the surfaces of the respective spacer parts 221, reflecting the light transmitted by the front side substrate 21 and color filters 223 having planar parts 223a formed on the respective surfaces of the reflection plates 222 and projecting parts 223b which pass through the slits 220 and reach the rear side substrate 22.
